

# Paving Machine

## SR 250 E

**A robust and reliable machine for the installation of composite elastic bases for athletic tracks, synthetic grass, sports**

This simple yet robust machine is ideal for the professional laying of athletic tracks and the base mats for synthetic grass installations.

The framework comprises a firm and stable H type structure.

Control panel

The main driving device is a motor driven caterpillar track chain with the speed controlled by a frequency converter. The width of the caterpillar track belt can be changed to suit either bound or unbound sub bases.

Moving the machine is simple using hydraulic mechanisms to raise and lower the transport wheels.
